

Site report: dementia.org

a.k.a. where patches bake
Derrick Brashear
The OpenAFS Project
30 Sep 2009

Architecture

- 3-2 db servers
 - ~~SunOS 4.1.4 sun4m alycia~~ (dated to 1995)
 - Linux 2.4 i386 meredith (also KDC, fs)
 - Linux 2.6 i386 dedlock (VM)
- 3 file servers
 - meredith
 - Linux 2.6 sarah-merrit (VM)
 - Linux 2.6 alice-comfort (VM, DAFS / testing)

Topology

- meredith, alycia are physical machines I left at CMU when I quit.
- Everything else is a VM racked at a colo site in New York.
- Users have a shell machine in Pittsburgh or are global.
- Web server (serves from AFS) also a VM.

Why

- Testing!
 - Actual users
 - Reasonable load
 - No service guarantee so I can occasionally cause pain.

Questions?
